

Vos Logistics Bulk Terminal

The logistics service provider for the handling and storage of dry bulk goods.

Who are we?

Vos Logistics' bulk terminal is the logistics service provider for all your dry bulk goods handling and storage for the non-food, food and feed markets. We can handle both bulk and packaged goods. We are flexible, fast and offer an excellent price-quality ratio. Moreover we are ISO 9001, FSSC 22000, SKAL EU, GMP+ B1, Halal, and Kosher certified.

Your product or service will be in the capable hands of our team of specialists (35+ FTE) in various fields such as customs, (container) transport and quality. As a team we focus on flexibility and quality, always basing ourselves on our clients' needs. The Vos Logistics bulk terminal offers a very wide range of options, the most important of which will be described below. If you would like more information on a specific activity or if your activity is not listed here, please do not hesitate to call or e-mail us as we love to help provide solutions.

- ✓ Fast and flexible service
- ✓ Wide range of activities
- ✓ ISO 9001, FSSC 22000, SKAL EU, GMP+ B1, Halal, and Kosher certified

Our activities

Packing/bagging

We have various machines for the filling of sacks, big bags and octabins. Weights vary from 5 to 1,500 kg.

Packaging materials

Packaging materials can be purchased by us in accordance to the client's wishes. Packaging materials can also be supplied by the client or the latter can utilize our standard packaging.

Re-packaging

Re-packaging is similar to packaging, the only difference being that for packing the materials are supplied in bulk while materials for re-packing are already packaged in a big bag, sack or octabin. We can re-pack the contents of these into other packaging in accordance to the client's wishes.

De-bagging

De-bagging takes place when the product is in packaging such as a big bag, sack or octabin and has to be supplied as bulk. We have various machines/tools for removing your product from a big bag, sack or octabin and transshipping it to bulk. If so desired, we can store the product in one of our silos after de-bagging it.

Storage

We have 45 silos of varying sizes at our disposal. Depending on the product, volume

to be stored and availability we will seek out the best available solution for you. Alongside bulk storage in silos we also have 35,000 m² of storage space indoors and roofed, for the storage of packaged goods in octabins, big bags, sacks, IBCs, etc.

Palletizing

Palletizing products entails placing packaging units such as sacks, big bags or octabins on a pallet. This is done when products come in without pallets, but also when a two-way pallet has been provided when a four-way pallet is required. Our machines semi-automatically stack products or replace the current pallet with a different one.

Loading/unloading

Loading and unloading packaged, but also bulk goods takes place in accordance to strict procedures as laid down by the ISO9001 standards. Furthermore, client- provided, specific instructions are recorded in our quality manual.

Sealing/shrink wrapping/labelling

As a logistics service provider we are an extension of our clients. It is important for products to be loaded and arrive at the buyer's site in perfect condition. Sealing or shrink-wrapping pallets is essential to achieve this. If a pallet or packaging is insufficiently recognizable we can equip it with (client-) specific labels.

Transport

Vos Logistics is the right partner to transport your goods. The website voslogistics.com provides more information on the options.

If transport to or from our trimodal terminal is concerned for containers per truck or per barge, bulk goods or packaged/palletized goods, we will be happy to organize this for you so you have one and the same contact for everything.

Other (specific) activities

Alongside the activities mentioned before, we can also dry, blend, mix, homogenize or sieve your product. The options to this end depend on the type of product and can be further analyzed on the basis of your product data.

Got a challenge with handling and storage of dry bulk goods? We'd love to help you out.

Cleaning station

Vos Logistics' bulk terminal also has a cleaning station where vehicles can be cleaned inside and out. Our cleaning station is ATCN/EFTCO, SQAS, Kosher and ISO 9001 certified and offers various options:

✓ **Non-food lane**

For the internal cleaning of tankers, silo trucks, tippers, curtainsiders, etc. of non-ADR goods.

✓ **Food lane**

For the internal cleaning of tankers and silo trucks suitable for the transport of food products. We have a separate food lane with special equipment for cleaning the hoses and couplings. At your request we can supply a foodstuffs declaration from our cleaning products' supplier.

✓ **Outside washing**

For washing the outside of various types of vehicle. First the worst dirt is removed manually, then a fully-automated washing program is implemented.

Are you interested in having your vehicles cleaned?
