

# Warehousing

## Looking for storage facilities for your products? Bring it on.

Our distribution centers are strategically located and have a combined capacity of over 200.000 m<sup>2</sup>, while growing every year. Our warehouses are qualified to store and handle different types of goods. Several of our warehouses are, for example, designed for the storage of dangerous goods. We handle all sizes of goods, no matter if they are palletized, packed in big bags, bulk or if they are oversized. We always find a solution to store your products. And if we don't have a location for you right now, we are open for new developments and might just open our new distribution center according to your needs.

# We simplify. Whatever it takes.

**Integrating with your ERP-system will make sure that you always have insight into your inventory.** To assure the highest level of accuracy, all goods movements are scanned through RF. Our warehouse staff is experienced in multi-order picking, handling mixed pallets, parcel picking & packing, sampling, managing returns and freight management services. We create custom made reporting dashboards in order to provide insights into your business and ensure quality levels. Anything we can do to simplify your logistics.

## Sustainable warehouses

We set ourselves environmental goals and help our customers to realize theirs. Our newest warehouses are BREEAM certified to reduce CO<sub>2</sub> emissions to the absolute minimum. Measures taken include ground source heat pumps, sensor-controlled LED lighting and solar panels. Additionally, we work according to the LEAN methodology in order to reduce waste and ensure efficiency within our operations.

## Storage of ADR goods

In order to handle your goods in the safest way possible, we have our own sustainable ADR storage facilities and transport solutions. Our buildings are fully equipped with, for example, a foam extinguishing system and sprinklers for particular dangerous goods sections. Aerosols are stored separately in dedicated areas.

## Cross-Docking

Lead-times are shortened and inventory is kept to a minimum, while service improves and working capital is optimized. Our people and systems are equipped to service you from our strategically located cross-dock facilities in the Benelux. Besides this, we make use of well-trusted partner hubs in Europe.

## Fulfilment & Value Added Logistics

Fulfilment is more than product handling and delivering goods to your customers. It is also about value added services such as

repacking, building displays, repairs, being flexible during peak seasons and analyzing customer data to continuously optimize fulfilment. And above all, it's how we efficiently integrate with your systems.

## Customs Services

Handling customs procedures is one of the many ways we can support your supply chain. Our customs services are fully integrated with your logistics process. Our in-house customs department operates according to our AEO certification. We offer bonded and public storage facilities.

## Food & Feed

For food and feed materials, we use specially assigned warehouses. Our teams from multiple sites are certified according to GMP+ and ISO 22000. Also for bonded storage, or a warehouse dedicated to your goods only, we simply find the right solution.
